Allowable Subject Matter

1. Claims 33-51 are allowed.

Goldwater disclose the construction of a valvular sail power plant for generating electrical energy from a flowing medium of wind comprising:

a stationary supporting structure;

a rotary structure supported for unidirectional rotation on said fixed structure;

a vertical rotary shaft supporting said rotary structure and rotatable supported by

said fixed structure;

said rotary structure comprising an open frame, a plurality of panels, each having a side edge rotatable supported by said open frame for pivotal movement between an open position perpendicular to said frame and a closed position in a plane of the frame;

said panels being supported from said frame solely by their side edges so that top and bottom edges thereof are free and unrestrained such that when the panels are in closed position and exposed to the flowing medium, the panels will exert a rotational force on the frame to produce rotation of the rotary structure;

said rotary shaft extending outwardly from said frame, and supporting said frame so that its lower edge is free and the frame can undergo free travel without restriction.

Atherton teach the construction of a simultaneous plural-directional flow motor having means coaxial with rotary shaft for the purpose of generating electrical energy from rotation of a frame and the rotary shaft.

Bailey teach the construction of a system, wherein the flowing medium is water, and the rotary shaft is horizontal for the purpose of utilizing energy in a fluid current.

2. The following is an examiner's statement of reasons for allowance.

The prior art of record, taken alone or in combination, fails to teach the construction of an apparatus for generating electrical energy from a flowing medium as described on independent claim 33, comprising:

a plurality of panels each having an open frame and a plurality of vanes supported by said frame, said vanes comprising thin rigid plate members, and having opposite side edges and being rotatably supported at one of said side edges by said open frame;

a system for pivotally moving said vanes in synchronism between open and closed positions, including an aligner cable connecting said vanes at side edges thereof opposite said rotatably supported edges; and

oscillatory stops between said frame and said vanes.

Dependent claims 34-51 are considered allowable by their dependence on allowed independent claim 33.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2834

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Pedro J. Cuevas whose telephone number is (703) 308-4904. The examiner can normally be reached on M-F from 8:30 - 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nestor R. Ramírez can be reached on (703) 308-1371. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9306 for regular communications and (703) 872-9306 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
